

SoDamContext

SoDamContext — AI Manual Health Check

A tool that **checks and creates** your “AI manual” (CLAUDE.md / AGENTS.md) in plain language — **even if you don’t know how to code** — so that AI (Claude Code · Codex) understands your project well.

0. What is this? (1-minute intro)

- AI coding tools (Claude Code · Codex) read an “AI manual” file called CLAUDE.md / AGENTS.md before they work.
- If that manual is **too long, contains a password/secret, or contradicts itself**, the AI gets confused and costs go up.
- **SoDamContext** gives that manual a **health check in plain language**, and if you don’t have one, **creates a small one from a few easy questions**.
- It hides jargon (CLAUDE.md → “AI manual”) and explains the real reason when you ask “**why?**”.

 **Honest note:** In this version, **only two features actually work:** “**Checkup**” and “**Intake (create)**”. “Treatment (auto-trim)”, “Prevention (auto-block)”, and “auto-sync of the two files” are **still in progress (planned)**.

1. Prerequisites (required programs)

Requirement	Why	How to check / install
Claude Code	Where this tool runs	OK if you already use it
Node.js 18+	The checkup tool runs Node internally	Type <code>!node --version</code> — if it shows v18 or higher, you're set. Otherwise install LTS from nodejs.org
(optional) Codex	Only if you also manage Codex's AGENTS.md	Codex users only

- OS: works on **Windows and macOS**. (Path examples here are Windows-based.)
- Internet: needed only for installation. Checkup and Intake run **100% on your own computer** (no data is sent out).

2. Download • Install

Claude Code (automatic install)

Paste the following into the Claude Code **input box** (the chat line), **one line at a time**, pressing Enter.

```
/plugin marketplace add sodam-ai/SoDam-Context-Eng  
/plugin install sodam-context
```

- Or just type `/plugin` to open the **menu**, find SoDamContext, and click **Install**.
- **After installing, fully close and reopen Claude Code (restart).** Otherwise the commands won't appear.

💡 **Using a local folder directly** (development/testing): replace `sodam-ai/SoDam-Context-Eng` with **the absolute path of that folder**.

e.g. `/plugin marketplace add D:\...\SoDam-Context-Eng`

Codex (manual install — partial support)

Codex has no marketplace, so you **place the skill folder under** `.agents/skills`. (Codex support is currently **partial** — detailed guide coming soon.)

3. Quick Start (5 minutes)

After install and restart:

1. **Just check** — in the input box:

`/sodam-context-checkup`

When it asks “which file?”, give the path to the `CLAUDE.md` of the folder you want to check.

2. **No manual yet (create one)** — in the input box:

`/sodam-context-intake`

Answer 5–6 easy questions; it shows a **preview** → asks “**create it?**” → **only then** makes a small manual.

You can also say it in plain language: “**check my AI manual with sodam-context**”.

4. Command List

Command	Easy name	What it does	Status
<code>/sodam-context-checkup</code>	Checkup	Checks the manual for bloat, duplication, secrets , size → plain report	 Works
<code>/sodam-context-intake</code>	Intake	Creates a small manual via questions when none exists	 Works

Command	Easy name	What it does	Status
(Treatment)	Treat	Backs up, then safely trims	🕒 In progress
(Prevention)	Prevent	Blocks secrets / excess length in advance	🕒 In progress

5. How it works

- **Checkup:** the tool **does not open your original file directly** — it runs an internal checker and reads **only the result**. So **secrets do not leak**. The report shows “**N problems**” **instead of a score**, and any secret is shown **masked** (sk-ant-...REDACTED). Reply “**why?**” for the reason and evidence.
- **Intake:** questions → **preview** → “**create it?**” **confirmation** → **only then writes the file**. It never creates files without asking. The result is **under 200 lines, 0 secrets**.
- **Codex (AGENTS.md):** Codex reads the **merged chain** of parent-folder and global manuals. The checkup verifies that **combined size (32KiB limit)** too. (Korean is 3 bytes per character, so byte size exceeds character count.)

6. Workflow

```

Install → Restart → [Do you have a manual?]
├─ No → /sodam-context-intake → create a small manual
└─ Yes → /sodam-context-checkup → problem report
      └─ "why?" → reason & evidence

```

7. File · Document locations

What	Location (Windows example)
Check/create target	CLAUDE.md · AGENTS.md in your working project folder
(Treatment) backup folder	<project folder>\.sodamcontext\backups\

What	Location (Windows example)
	(treatment in progress)
This manual	README.md · GUIDE.md in the plugin folder (KO/EN, md·pdf)

8. Troubleshooting

Symptom	Cause	Fix
Commands not in the list	Did not restart after install	Fully close and reopen Claude Code Run ! claude plugin marketplace update
Still not visible after restart	Installed copy not refreshed	sodamcontext-marketplace, then restart
“node not found”	Node.js missing/old	Install LTS from nodejs.org , then restart
A different feature responds	A similarly-named plugin intercepts	Use the /sodam-context-... slash command instead of plain language
Checks the wrong file	“which folder?” was ambiguous	Give the exact absolute path of the file
Says there’s a password	Something looks like a key in the manual	Reissue that key and remove it from the manual (use env vars) — the tool never deletes it automatically

9. Uninstall

```
/plugin uninstall sodam-context
```

- Generated `CLAUDE.md`·`AGENTS.md` are **your files** and remain (delete them yourself if you wish).
-

10. Safety · Security (one-liners)

- **No secret reading**: the tool never reads or prints a secret's "value"; it only confirms one **exists** and shows it **masked**.
 - **No automatic changes**: it never creates or edits files without your confirmation.
 - **Honest limits**: it only catches **known patterns**, so it does **not guarantee** "100% safe / perfect detection" (for reference only). Reissue/manage important keys yourself.
-

11. License · Copyright · Commercial Use · Disclaimer

 **This is not legal advice.** The following is general guidance; **your own review / legal review is required** before public release, distribution, or commercial use.

- **License: Apache License 2.0** © 2026 **SoDam AI Studio**.
